TM-100**

wireless tyre pressure monitoring system

product description

technical specifications

Let's be honest:

- **When have you** checked your tyre pressure last?
- **Do you know exactly**, what is the exact pressure in your tyres at this very moment?

Did you know ...

- ... that through diffusion your tyres are losing 1,5 psi-pressure per month?
- ... that more than a third of all motorists are driving with their tyres significantly underinflated?
- ... that with underinflated tyres your fuel consumption is higher than necessary?
- ... that with only 7 psi of underinflation you are throwing away half of your tyres' lifetime?

Install TireMoni Checkair!

... because only TireMoni shows you all four tyre pressure values at one glance - you will drive safely and conserve our environment and your pocket money.

TireMoni Checkair	and the competition?
Installation in under 5 minutes	Installation time up to 4 hours including cables
shows all four values: one look - fully aware!	displays only one value or warning lamp
exchangeable standard batteries	when batteries are dead, sensors must be replaced
one set of sensors is sufficient for summer and winter tyres	second set of sensors required for winter tyres
affordable system and low cost of ownership	high follow up cost

What is TireMoni Checkair?

- **TireMoni Checkair** is a high-tech wireless tyre pressure monitoring system
- **TireMoni Checkair** can be installed in less than five minutes. Calibration is not required!
- **TireMoni Checkair** wireless sensors are installed onto the valves in place of the valve caps.
- **TireMoni Checkair** monitors tire pressure, temperature and battery status and displays current values.
- **TireMoni Checkair** LCD-Monitor provides a friendly full graphics display and is very easy to read.
- **TireMoni Checkair** comprises three large buttons for easy operation.
- **TireMoni Checkair** provides user definable warning thresholds for tyre pressure and temperature.
- **TireMoni Checkair** comes in four models.

Advantages of TireMoni Checkair:

- Reduces fuel consumption (more mpg)
- Increases tyre life time (more mileage)
- Improves driving safety
- Warns immediately when upper or lower threshold(s) are met (thresholds settable by user)
- Permanent display of all (2, 4 or 6) pressure values
- Warns long before underinflation can cause any serious damage
- Pressure loss instationary vehicle is reported at the beginning of subsequent drive
- Switching sensors between summer and winter tyres is fast and easy
- Sensors can be protected against theft and vandalism (anti theft lock included)
- Battery life time: Display ca. 1 - 2 years, Sensor ca. 2 - 4 years (depends on mileage)

Model number	TM-100	TM-210	TM-260	TM-400
# of sensors	4	4	6	2
Measur. range	0 - 60 psi	0 - 160 psi	0 - 160 psi	0 - 60 psi
Accuracy	1 psi	2 psi	2 psi	1 psi
Lower threshold	16 - 36 psi	0 - 160 psi	5 - 160 psi	16 - 36 psi
Upper threshold	38 - 60 psi	0 - 160 psi	20 - 160 psi	38 - 60 psi
Application	car trailer	motorhome transporter	motorhome transporter	motorcycle
